

May Technology Board Report

May 26, 2009

Desktop Systems

We have begun working with the Instructors to plan for their migration to laptops next year. The recently purchased laptop cart is complete, and ready of deployment. However as it is late in the year, we have reserved it for special requests only at this point.

We developed the desktop deployment schedule for this summer.

We completed and assisted with the internal asset inventory.

Network and Server Systems

We have worked with Treese Communications on the conference call issue, and have begun testing the finally released voicemail via web technology.

I have developed the summer plan schedule for the infrastructure and planned improvements.

Student Information System (SIS)

I participated in a COOP Committee to explore integrating the COOP process into the SchoolDESX product more seamlessly. I have had a few conversations with SchoolDESX, LLC regarding their next release of SchoolDESX, and the improvements they have made. They promise a complete platform rewrite that encompasses current technology advancements, and existing SchoolDESX CTC complexity.

Travel

Attended the May monthly RTSG meeting at IU5 where we spent a good portion of time discussing faculty laptops usage, privileges, and the associated challenges. It is a growing topic among the districts currently providing the hardware, and those looking to move toward it.
