

## **Technology Board Report**

### **Desktop Systems**

Updated our Windows Deployment Server with drive scouring utilities to ensure that all surplus computers were wiped and cleansed of any ECTS intellectual property.

We have disposed of all currently surplus computers to Erie Computer Recycling (ie. PC's 4 U) on Hawethorn Dr. in the Baldwin Business Park. We received approximately \$10 per system which included monitor disposal. We thank them for their competitive offer, and are pleased they went to a local business that intends to serve the local community.

### **Applications and Database**

Compiled contact information from several sources for the Graduate Survey processor Life Track.

Updated eDESX to include a password reset utility for the Alternative Education staff.

Reviewed ADSync, a software component to improve student user account automation; however, the challenge to implement was greater than what we currently have in development.

### **Network and Server Systems**

Scheduled Time Warner Cable installation for May 1, and May 14 for separate pieces of the installation.

Worked with Treese Communications to support the Time Warner Cable migration of services.

Completed Ruckus Wireless demo with satisfaction; and intend to replace the Wireless Network with Ruckus equipment this summer.

### **Staff**

Charles Ferris is getting acclimated to our technology and our facilities. He seems very happy; and he has shown admirable dedication in assisting with the surplus project that consumed a significant amount of time.
