Technology Board Report

Desktop Systems

Ordered and have received most of the 2011-2012 desktop and laptop computer refresh systems and have begun deploying them.

Worked with Maria Sargent to finalize the order for the Drafting Lab CAD software, and worked with Tim Varner at Synergis to ensure our licensing is the most affordable option, and our labor investment remains bi-annually in refreshing the software.

Eagles Nest, Culinary, & Cafeteria Projector Installations are near complete. I want to commend my Summer Help Mike Stoddard, and Steven Pavolko, along with Peter Craven our substitute Technology Technician for embracing this challenge and being innovative with the mount solutions. It's been challenging, and has offered them opportunities to work with metal, outside their chosen profession, and they've done an amazing job.

Network and Server Systems

Continue to work on a migration plan for duplicating SchoolDEX data into an SQL server to provide for the Student and Parent Portal for 2011-2012.

I'd like to thank Pam Lasher, Tiffany Neely, Jenny Alick, Joe Tarasovitch, Lisa Sorensen, and Patty Palo for their combined efforts to support both our PIMS reporting and our Admissions and Registration process with SchoolDEX as we work toward improving the processes of recording all of this data, and distributing that work.
