

Technology Board Report

Desktop Systems

Received AutoCAD and are in the process of deploying it.

Deploying routine software, computers, and refreshing systems.

Installed a Projector in the Transition Center. De-installed the Smart Board from Art and Design.

Purchased 4 iPad's for the Transition Center, and demoed them over the summer to identify additional uses and opportunities.

Applications and Database

Added two new features to the eDESX Parent Portal. One permits parents of multiple students to have a single sign-on to access both students' reports. The other provides access to previous years progress reports.

Added a new feature to the internal eDESX for faculty and staff access to student IEP documents.

Successfully completed the student import from the Admissions Database to the SchoolDESX system. Encountered a significant issue with the import, but was able to write a program to resolve the inconsistencies.

Network and Server Systems

We have been operating on our new Internet and Phone service from Time Warner for two months now; and it's been working really well. After resolving a few initial issues, I'm pleased with the performance. A few minor issues remain, and I continue to work with the vendors to overcome the challenges.

Staff

Justin Mullen has been helping us out over the summer months, as our seasonal help with refreshing computers, and reconnecting classrooms after cleaning.
