

Technology Board Report

Desktop Systems

Connected Auto Body Paint Mixer computer to our network, for an internet connection for over the internet updates, and other services available from PPG with a connected system.

Ordered and replaced two Faculty Laptop batteries. Also replaced a desktop power supply that had a fan that was becoming disturbingly audible.

Ordered 5 Apple MacBook Pro's for Art and Design, as part of the Perkins Grant revision for 12-13.

Updated the iMac's in Art & Design to resolve an issue with Adobe Premier while editing Video. Also installed a valid license for Final Cut Pro, and Aperture 3.

Applications and Database

Met with SonisWeb and Infinite Campus to develop a roadmap for evolving our Student Information Systems and our communication offerings to better serve the Faculty, Student, Parent, Home School, and Administration needs.

Network and Server Systems

Located and terminated a decommissioned network cable that was used in Auto Body several years ago, so it could be used for the Paint Mixing computer for connection to the internet. Developed custom policies, and worked with PPG Software support to ensure it had the necessary internet access, yet still restricted enough at the Instructors request that it would not be used by students for internet access as it is always logged on, and not setup for student internet tracking.

Performed some cleanup and maintenance on the student file server, as it was running out of space. This server will be completely overhauled this summer.

Travel

Participated in Technology Manager Interview at North East School District in support of their hiring process.

Took personal time to Travel to Lancaster, PA to sit for the Consortium of School Networking, National School Technology Leadership organization certification test. It is a multi-part certification and is not yet completed.
