

Technology Board Report

Desktop Systems

Installed several new cameras to replace/repair inadequate units. We purchased 21 new cameras last summer with the rest of the equipment in anticipation of replacing cameras as needed.

Refining Windows 10 installation images and procedures in anticipation of this summer's deployments.

Assisted with NOCTI test preparation, ensured software and wireless capacity requirements were satisfied.

Solicited quotes for computer purchases to replace computer in GRA, and CMP this summer. We will also be rotating some laptops; and refurbishing computer from GRA and CMP for Admin, Support, and Clerical Staff.

Applications and Database

Working in Infinite Campus preparing for end of year reports, and next year rosters. This includes importing student data from the Admissions database, working with Pam Lasher in the High School Office to setup courses and calendars for next year, and refining some internal reports.

Network and Server Systems

Revived our other Dell R710 that has been on a palette since 2014 to offload our System Center Deployment systems from our production VRTX Server and our other Dell R710 that has been serving for the Camera system. System Center Deployment services are now all on one R710 server, and the Camera software is now by itself on the other server.

Setup Sonicwall Bandwidth Management as an additional layer of security and priority to ensure that classroom critical content is given the highest priority on our internet connection. This was in-part initiated by an interest to ensure NOCTI testing went smoothly, prompted by the coincidental circumstance of the NOCTI website going down; later determined to be on their end.
