

Technology Board Report

Desktop Systems

Working through an issue in Graphics related to Windows 10 and printer drivers.

Completed repairs on a laptop cart and returned it to the Health Lab.

Working through an issue with a broken TV, and having another moved.

Applications and Database

Working through some issues introduced by a recent Infinite Campus update. We scheduled another update in the late evening of Oct 21 to resolve them.

Working with our Admissions Coordinator to get freshman database setup ideally improving on the changes we made last year.

Worked with the High School Office and Danielle Wilber, the ADS Instructor, to get student pictures into Infinite Campus.

Network and Server Systems

Resolving issues with the new Security Camera system; finally had the vendor engineer on-site to discuss plans and opportunities. We have spent significant time adjusting camera motion sensitivity and areas; as well as adjusting camera and recorded resolutions to optimal visibility and total disk storage. Discussing options for increasing our storage for the system; a known next step when purchased this equipment.

Continue to performance tune the Sharepoint Server that hosts our eClass system and Electronic Bulletin Board. Several updates have been released, as well as several configuration suggestions that resolve several issues we've experienced.

Changed our Anti-SPAM service to Quarantine messages at the service provider, rather than being rejected. This should improve individual needs to self-service suspected messages that otherwise would not be retrievable. This change was implemented at the suggestion of Microsoft as we worked through a support case to identify why some messages were being rejected.
