

Progress Report
Study for Proposed Additions and Alterations
Erie County Technical School
April 23, 2018

The HHSDR team of architects and engineers have prepared written documentation of the existing conditions of the building for the report. We are also completing a drawing of the existing floor and site plan illustrating the current building usage.

We are now focusing on two (2) options to expand and renovate the building to accommodate the enhancement of the technical programs which will include conceptual floor plans.

Following the completion of these plans we will meet with the Administration to review these concepts.

Following the verification of the conceptual plans we will prepare an opinion of cost for each option. We plan to complete the study tasks by the end of June 2018.
