

Technology Board Report

Math Class Tablets

80 Android Tablets have been setup and deployed in the Eagles Nest for the math class to use. Currently they only have the digital book, and a calculator application enabled for use.

G-Suite for Education

To provide the management and content delivery to the 80 tablets, we have established our Google G-Suite for Education relationship with Google. This is a process, that entails an application, verification, and a few other tech details that results in Google extending this suite of services to use for free. We will continue learning and exploring our options with G-Suite, and how best to leverage their value in our technology landscape that is **NOT** 1:1, and therefore outside their primary delivery model.

Clever.com Student Data Sharing and Single Sign On

We implemented the connector between Infinite Campus and Clever.com to facilitate single sign-on and data sharing between our Student Information System and the multitude of available application providers registered with Clever.com. At this point we have completed the integration with Navigate Prepared, and VitalSource Bookshelf.

VitalSource Bookshelf

We have created the integrations necessary to permit digital delivery of the Personal/Business Financial Math text to the classroom tablets, as well as student personally/district owned devices.

Navigate Prepared

We have implemented the integration necessary to leverage the emergency response service within Navigate Prepared to roster students during drills and emergency's. Fire Marshall's, Joe Tarasovitch, and Aldo Jackson have discussed the functionality and begun rolling out the training to faculty and staff.

Student Photos in Student Information System

Student pictures have been uploaded to Infinite Campus. This is an annual process to aid our faculty and staff familiarizing themselves with our students, as well as used for our Student ID's.

Cafeteria Mobile POS

Delivered a Mobile POS laptop for cafeteria use in the mobile morning breakfast line. Additionally issued an iPad for their use in the cafeteria for inventory and procedural tasks.

PIMS

I have submitted our 1617 end of year PIMS data, and completed that ACS process.
