Computer Programming

Students in Computer Programming recently put their skills to use solving a real-life problem. Students wrote a program for an on-line ordering system that will allow the Skills USA snack cart to continue operations during the renovation. ECTS students place orders on-line and those running the cart are able to sort orders by item and lab and easily see the amount owed by each student.

The following students developed the system:

- John Cancilla: Junior, Harbor Creek
- Westin Hartzell: Senior, North East
- Michael Penfield: Senior, Girard
- Dylan Wilson: Senior, Girard
